

Our AI Policy

Please note that we discourage clients from providing our designer with logos or other branding elements that have been created with AI (Chat GPT etc).

If you require our designer to incorporate an AI element in to a design, there may be an increase in cost, as AI elements are not formatted correctly for professional design and print usage, and therefore take much longer to work with (often with lesser results).

We also can not guarantee that designs with AI included are free from copyright restrictions, and often can not be trademarked to your business.

Our designer can help create logos and branding that is unique, professional and much more versatile in usage.
